## TRAINING PERSONNEL TOWARDS OPERATIONAL ENERGY EFFICIENCY OF THE BUILDINGS

Securing energy efficiency is one of the valuable means to limit climate change, especially through decreasing the energy use in public buildings, which represent one of the main energy users. The ability to influence operational parameters without significant investments is a low hanging fruit to achieve different kind of savings. TRAP-EE project will train the personnel responsible for property maintenance within the public buildings to implement soft measures for achieving efficient energy use and securing healthy and comfortable indoor environment.

This project has been funded with support from the European Commission. This publication reflects the views only of the authors, and the Commission cannot be held responsible for any use which may be made of the information contained therein.

## The TRAP-EE project has four key aims:

**1.** To identify and analyse the specific requirements of the target training group and local environments.

**2.** To develop the training programme for the personnel responsible for property maintenance (caretakers) towards operational energy efficiency of the buildings.

**3.** To test and evaluate the training programme within the pilot group of caretakers in Slovenia and Croatia.

**4.** To integrate the training programme in the national and regional training systems and practices in the context of the vocational education and lifelong learning.

## TRAP-EE Project involves five partners from three different EU countries:

**IRI UL** - Institute for innovation and development of the University of Ljubljana (Slovenia)

**HEP ESCO** - Energy service company (Croatia)

**GOLEA** – Local energy agency of Goriška region (Slovenia)

**Srednja tehniška šola Koper** – Vocational education and training provider (Slovenia)

**energie:bewusst Kärnten** - Association for the sustainable reduction of the energy consumption within the region of Carinthia (Austria)
